

ENHANCING INTIMACY, NATURALLY

Reclaiming Your Spark

Intimacy is a beautiful part of life, bringing joy, closeness, and connection to relationships. Whether it's feeling that spark of desire, sharing an emotional bond, or enjoying physical closeness, intimacy matters. But sometimes, challenges like low desire, trouble with arousal, or difficulty reaching satisfaction can make things feel less fulfilling. These issues are incredibly common, affecting both men and women at different stages of life. The good news? You're not alone, and there are solutions to help you feel confident and connected again.

At Physicians Preference Pharmacy, we compound special medications to support your intimacy discreetly. One in particular, is our proprietary synergistic formulation which includes a combination of —**PT-141, oxytocin, and tadalafil**—into one easy-to-use sublingual tablet that dissolves under your tongue. This medication works with your body to boost desire, deepen emotional connection, and enhance physical readiness, helping you rediscover the joy of closeness. Let's explore how it works and why it might be right for you.

What's in Our Special Blend?

Our medication is like a recipe for intimacy, with each ingredient playing a unique role. Together, they create a well-rounded approach to help you

feel your best, both physically and emotionally. Here's a closer look at the three ingredients:

PT-141: The Desire Booster

PT-141 is a unique ingredient that sparks desire by working directly with your brain. Unlike other medications that focus on blood flow, PT-141 helps you feel that urge for intimacy, making moments with your partner more exciting. It's approved for women who struggle with low sexual desire and is also used by men to support arousal. Originally developed from a peptide related to tanning, PT-141 focuses on boosting passion without affecting your skin. It's like a gentle nudge to reignite your inner spark.

Oxytocin: The Connection Hormone

Often called the "love hormone," oxytocin helps you feel emotionally close to your partner. It's naturally released during moments like hugging, cuddling, or sharing special times together. Oxytocin deepens your sense of connection, making intimacy feel more meaningful and satisfying. It also supports stronger, more fulfilling moments during closeness, helping you feel truly bonded. Your body makes oxytocin every day, but levels can dip with age, so our medication gives you a little boost.

Tadalafil: The Physical Support

Tadalafil, known by its brand name Cialis®, helps your body get ready for intimacy by improving blood flow to key areas. For men, it supports stronger, longer-lasting erections. For women, it enhances sensitivity and arousal, making physical closeness more enjoyable. Tadalafil works for up to 17 hours, giving you flexibility and confidence when the moment feels right. It's a reliable way to ensure your body is ready to match your heart and mind.

ACCREDITED

Physicians Preference Pharmacy standards are more stringent than those of the United States Pharmacopeia (USP). In addition to onsite weight testing, we send multiple samples per week to an outside laboratory for potency testing. Physicians Preference Pharmacy ranks first in Houston for the number of samples sent for potency testing and in the top 8% of pharmacies nationwide.

Physicians Preference Pharmacy is a Houston-based, PCAB-accredited compounding pharmacy serving physicians and patients since 2001. We are licensed to work with doctors and ship to patients in 49 states (excludes AL).

Why Combine These Ingredients?

Each ingredient supports a different part of intimacy: PT-141 boosts desire, oxytocin strengthens emotional connection, and tadalafil enhances physical readiness. By combining them into one tablet, we've made it simple to address all these aspects at once. The tablet dissolves quickly under your tongue, so it's discreet, convenient, and easy to use—whether you take it daily or just before a special moment. This all-in-one approach is designed to help both men and women feel their best in the bedroom and beyond.

How Does It Work for You?

Our medication is personalized for each person, with doses tailored for men and women based on your needs. Here's what a typical dose might look like:

- Men: 1 mg PT-141, 10 mg tadalafil, and 40 units oxytocin.
- Women: 1.5 mg PT-141, 5 mg tadalafil, and 100 units oxytocin.

You usually take the tablet about 20 minutes before intimacy, or daily if your doctor recommends it. Your healthcare provider will work with you to find the perfect plan, ensuring the medication fits your lifestyle and goals.

What Makes Our Medication Special?

Our blend targets three key areas of intimacy, making it a complete solution. Here's a simple chart to show how each ingredient contributes.

The chart at right shows how the ingredients work together to support your mind, heart, and body, creating a holistic approach to intimacy.

What to Expect

Most people find our medication easy to use with few side effects. However, it's good to know what might happen:

- **PT-141:** Some may notice mild nausea, flushing, or a slight headache, but these are rare with the under-the-tongue tablet. Unlike other medications for intimacy, PT-141's side effects are usually milder and shorter-lived.
- **Oxytocin:** Side effects are uncommon, but it may affect mood in some people. If you have conditions like bipolar disorder or are pregnant, talk to your doctor first.
- **Tadalafil:** Could interact with certain heart medications (like nitrates or alpha-blockers), so share your full medical history with your doctor.

Our pharmacists carefully craft this medication to be safe and effective. It's important to talk to your healthcare provider to ensure it's right for you, especially if you have specific health conditions or take other medications. For example, if you're using Low Dose Naltrexone (LDN) for pain, your doctor may need to adjust your plan to ensure both medications work well together.

Why Choose Physicians Preference Pharmacy?

At Physicians Preference Pharmacy, we believe intimacy is about more than just physical closeness—it's about feeling connected, confident, and fulfilled. Our custom medication is designed to support every part of your intimate life, from sparking desire to deepening emotional bonds. We're committed to providing personalized care in a private, compassionate way, so you feel comfortable every step of the way. Our team of expert pharmacists is here to answer your questions and work with your doctor to create a plan that's just right for you.

Your Next Step to Greater Connection

If you're ready to bring back the spark in your intimate life, we're here to help. Call us at **(281) 828-9088** to learn more about how our medication can support you. We'd love to talk with you and your doctor about how we can make intimacy feel natural, joyful, and fulfilling again. Let's work together to help you feel your best—mind, body, and heart.
