

ELEVATED INTIMACY STARTS HERE

Sexual Performance Doesn't Discriminate

As sexual dysfunction continues to affect a significant portion of the adult population, impacting quality of life, relationships, and emotional health, interest in combination prescription therapies has grown. Sexual dysfunctions include, but are not limited to, desire disorders, arousal disorders and orgasm disorders, which is why a wide-reaching compounded product can be very effective for individuals who experience such disorders and the associated symptoms. Among the most promising compounded options is our proprietary synergistic formulation which includes a combination of **PT-141**, **oxytocin** and **tadalafil**.

INGREDIENTS AT A GLANCE

PT-141: The Central Arousal Enhancer

PT-141 (Bremelanotide), which is FDA-approved for hypoactive sexual desire disorder (HSDD) in premenopausal women, is readily used off-label for both men and women. PT-141 is used to help improve sexual dysfunction in both men for erectile dysfunction and in women for sexual arousal disorder. PT-141 was originally developed from the tanning

peptide, Melanotan 2, which is a synthetically produced variant of a peptide hormone naturally produced in the body that stimulates melanogenesis or an alpha-Melanocyte stimulating hormone (MSH). PT-141 has been shown to exhibit libido-enhancing effects by activating the melanocortin receptors MC1R and MC4R in the hypothalamus to enhance sexual desire and arousal via dopamine modulation, without the effect of skin tanning. Unlike Viagra[®] and other related medications, it does not act upon the vascular system, but instead directly increases sexual desire via the nervous system.

Oxytocin: The Bonding & Orgasm Optimizing Hormone

Oxytocin is a neuropeptide made in the hypothalamus and released by the pituitary gland. Oxytocin has long been known to be important for its role in social bonding, sexual intimacy, emotional connectivity, as well as amplifying climax and arousal. In humans, oxytocin release occurs in a daily rhythm and generally peaks around noon; and as with many hormones oxytocin levels naturally decline with age. Importantly, oxytocin enhances emotional intimacy and orgasmic satisfaction, addressing the often-overlooked psychosocial aspects of sexual function.

 PHARMACY
COMPOUNDING
ACCREDITATION
BOARD
ACCREDITED

Physicians Preference Pharmacy is a Houston-based, PCAB-accredited compounding pharmacy serving physicians and patients since 2001. We are licensed to work with and ship to doctors and patients in 49 states (excludes AL). Our standards are more stringent than those of the United States Pharmacopeia (USP). Physicians Preference Pharmacy ranks first in Houston for the number of samples sent for potency testing and in the top 8% of pharmacies nationwide.

Oxytocin should be used with caution in those with a hypertonic or hyperactive uterus, those who are pregnant, and those who experience manic episodes or bipolar disorder. Low Dose Naltrexone (LDN) and oxytocin may also competitively bind, potentially lowering the pain control offered by LDN, which does not exclude concurrent use, but dosing and symptom improvement should be evaluated.

Tadalafil: The Enduring Vasoactive Agent

Tadalafil is a phosphodiesterase-5 (PDE5) inhibitor which increases cGMP levels in smooth muscle, resulting in vasodilation and improved penile and clitoral blood flow and engorgement. Tadalafil, commonly recognized by its brand name Cialis®, is approved for erectile dysfunction and benign prostatic hyperplasia, while commonly being used off-label in women with female arousal disorder. Tadalafil provides long-lasting enhancement of genital blood flow (half-life ~17.5 hours), supporting sustained physical readiness for intimacy.

Why Combine Ingredients?

At Physicians Preference Pharmacy, these three ingredients are combined into a single sublingual tablet, offering a simple, convenient and discrete dosage form. Independently, these ingredients can elevate one’s experience in the bedroom, yet together, they target distinct and complementary pathways involved in sexual arousal and function, offering a holistic approach for both men and women.

FEATURE	PT-141	OXYTOCIN	TADALAFIL
Central Arousal	✓	✓	✗
Emotional Connectivity	✗	✓	✗
Genital Vasodilation	✗	✗	✓
Orgasm Enhancement	⚠	✓	⚠
Gender Versatility	✓	✓	✓

Key: ✓ Primary benefit, ⚠ May contribute indirectly, ✗ Not a primary effect

DOSING PT-141/Tadalafil/Oxytocin

When compounded into a single delivery route, synergy of these ingredients can be achieved by tailoring the dosage appropriately for both men and women.

Common dosing for men:

1 mg PT-141/10 mg Tadalafil/40 units Oxytocin (usually dosed on an as needed basis about 20 minutes prior to intimacy, or daily)

Common dosing for women:

1.5 mg PT-141/5 mg Tadalafil/100 units Oxytocin (usually dosed on an as needed basis about 20 minutes prior to intimacy, or daily)

SIDE EFFECTS

• **PT-141** may cause nausea, flushing, or headache in some users although very unusual with the sublingual dosage form. Side effects of peptides are generally much more pronounced with the injectable dosage form. Additionally, men have reported that headaches experienced from popular erectile dysfunction medications like Viagra® and Cialis were more intense.

- **Oxytocin** has few side effects but may affect mood in susceptible individuals.
- **Tadalafil** may interact with nitrates and alpha-blockers and should be prescribed with caution in patients treated for cardiovascular conditions.

At Physicians Preference Pharmacy, our proprietary sublingual combination of PT-141, oxytocin, and tadalafil offers a comprehensive, and broadly effective approach to improving sexual health. By addressing neurological, emotional, and physiological components of arousal and sexual performance, our formulation is especially well-suited for patients seeking full-spectrum enhancement of intimacy and sexual satisfaction.

For questions about this formulation and its benefits, please contact Physicians Preference Pharmacy at **(281) 828-9088**. It would be our privilege to serve you!
